

**Program Name:** YAPxx03\_1 (where 'xx' is the last two digits of your login id)

The purpose of this exercise is for you to create a simple ABAP report using system fields, icons, and numbered text elements (text symbols).

Using the program you created in the previous example, code the appropriate statements to generate the report shown in the sample output:

For the current date, time, and user name (login id), use the following system fields: SY-DATUM, SY-UZEIT, and SY-UNAME. To display all the available system fields, click on the 'Help' pushbutton in a program and enter the table structure "SY".

Use the following icons: ICON\_DATE, ICON\_TIME, and ICON\_ADDRESS. To display all the available icons, execute the program "SHOWICON" from the initial screen of the ABAP Editor (transaction code "SE38").

You should not use any text literals in the program. To display your name and address lines, use the numbered text elements (text symbols).

Use the "Titles and Headers" section of the text elements to maintain the report's list header ("User Address Information").
